

MyBiotech GmbH:

One location - one company - bundled knowledge and experience!

The two life science companies **MyBiotech GmbH** and **MJR PharmJet GmbH** are combined in a merger of equals and will continue their business under the trademark of MyBiotech.

In January 2020, MyBiotech GmbH, a start-up company in the biotech industry, and MJR PharmJet GmbH, experts in pharmaceutical development joined forces and will further expand their activities in biotech and pharma.

Both companies complement to each other with years of combined experience. "Not only the portfolio of both companies is bundled with the merge but also the broad know-how of our team," explains Dr. Daniel Müller, managing director and co-founder of MyBiotech. The result is a young team of over 20 scientists and laboratory technicians who are intensively working on new products and formulations. Innovative products will be created with the merge of pharma and biotech knowhow. "Working in such a team and the resulting innovative products offer a very good economic perspective," said Dr. Rudolf Krumbholz, shareholder and, as a successful entrepreneur, also mentor of MyBiotech.

The merger will not remain the only major change in Überherrn. From 2020, own products will be developed and manufactured on site. The focus is on green technologies, e.g. for the sustainable production of omega-3 fatty acids from algae. The manufacturing of innovative, more efficient pharmaceuticals will also be tackled: "Production in the pharmaceutical sector will take place under strict regulations according to GMP. The combination of biotechnology and pharmaceutical development is unique in this form, and will help MyBiotech to further grow and expand.", said Dr. Emre Türeli, CSO of MyBiotech.

About MyBiotech GmbH

Both companies are partners of the Instillo Group, which offers a diverse and unique location with all of its members. From the **development** by MyBiotech GmbH and nanoSaar Lab GmbH, through the **stability test** by Quasaar GmbH, up to **production** facilities by MyBiotech GmbH, everything is done at the same industry campus. The companies are also connected through the unique and patented technology: microjet reactor. This small reactor offers a wide range of applications in chemical, pharmaceutical and biotechnological sectors.

MyBiotech GmbH was founded in 2016 on the aforementioned industry campus in Saarland. Through the Instillo Group's large network of contacts, MyBiotech GmbH can benefit from its worldwide reach and has collaborations in over 20 countries already.
